EDGE IMPULSE

Marcelo Rovai

Select project

Create a new project

Enter the name for your new project:

IESTI01 - Image Classification

Choose your project type:

Developer
20 min job limit, 4GB or 4 hours of data, limited collaboration.

Enterprise
No job or data size limits, higher performance, custom blocks. [Learn more](#)

Create new project

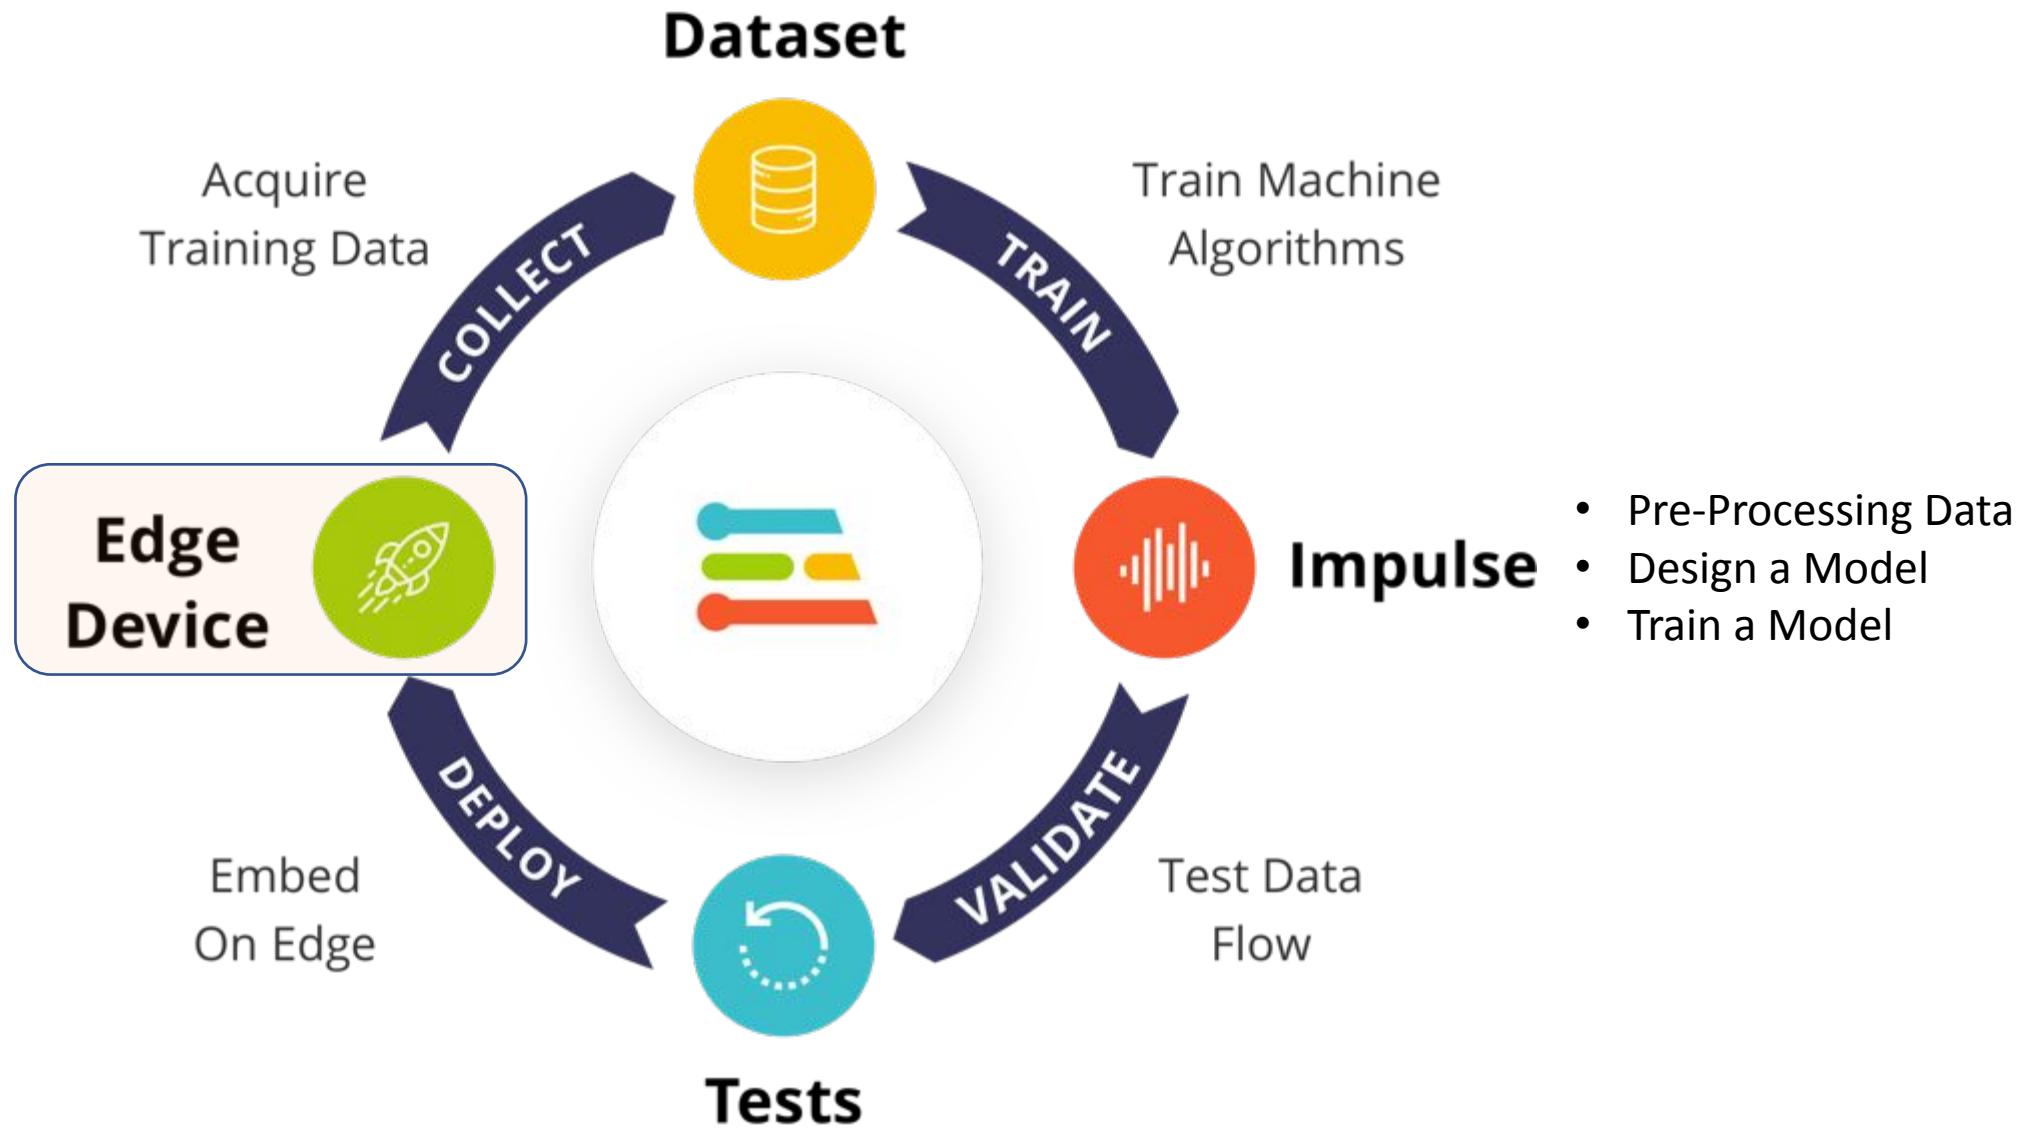

Marcelo Rovai / SciTinyML22-KWS

Marcelo Rovai / Cifar10_Image_Classification

Marcelo Rovai / IESTI01-Cifar10_Classification

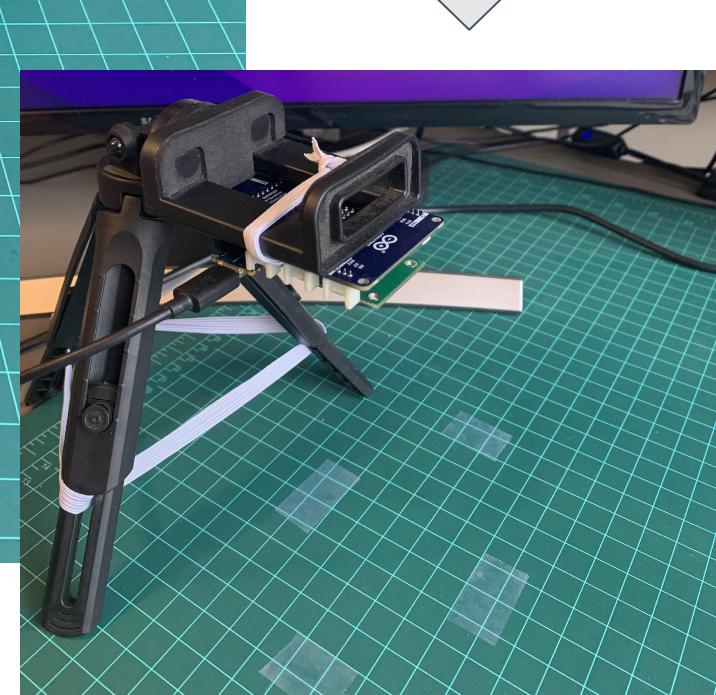

Marcelo Rovai / Bean Disease Classifier

The screenshot shows the Edge Impulse Studio interface. A modal window titled "Create a new project" is open in the center. It prompts the user to "Enter the name for your new project:" with a text input field containing "IESTI01 - Image Classification". Below this, it asks "Choose your project type:" with two options: "Developer" (selected) and "Enterprise". The "Developer" option includes a note about a 20-minute job limit and 4GB/4-hour data limit. The "Enterprise" option includes a note about no job or data size limits and higher performance. At the bottom of the modal is a green "Create new project" button. In the background, there's a list of existing projects by Marcelo Rovai, each with a small profile picture next to the project name and a delete icon. The projects listed are: "Marcelo Rovai / SciTinyML22-KWS", "Marcelo Rovai / Cifar10_Image_Classification", "Marcelo Rovai / IESTI01-Cifar10_Classification", and "Marcelo Rovai / Bean Disease Classifier". The overall background has a grid pattern with orange and yellow squares.

Arduino Nano 33 BLE Sense

The Arduino Nano 33 BLE Sense is a tiny development board with a Cortex-M4 microcontroller, motion sensors, a microphone and BLE - and it's fully supported by Edge Impulse. You'll be able to sample raw data, build models, and deploy trained machine learning models directly from the studio. It's available for around 30 USD from [Arduino](#) and a wide range of distributors.

The Edge Impulse firmware for this development board is open source and hosted on GitHub: [edgeimpulse/firmware-arduino-nano-33-ble-sense](#).

Arduino Nano 33 BLE Sense

Installing dependencies

To set this device up in Edge Impulse, you will need to install the following software:

1. [Edge Impulse CLI](#).
2. [Arduino CLI](#).
 - Here's an [instruction video for Windows](#).
 - The [Arduino website](#) has instructions for macOS and Linux.
3. On Linux:
 - GNU Screen: install for example via `sudo apt install screen`.

Note that the **1. Edge Impulse CLI** is not necessary for Arduino Nano-33 if you use WebUSB.

The screenshot shows the Edge Impulse website with the Arduino Nano 33 BLE Sense development board highlighted. The board is a small blue PCB with various components and a green LED. On the left, there's a 'Watch on YouTube' button. The right side of the page contains sections for 'EDGE IMPULSE CLI', 'PRE-BUILT DATASETS', and 'TIPS AND TRICKS', along with instructions for installing dependencies.

1. Connect the development board to your computer

Use a micro-USB cable to connect the development board to your computer. Then press RESET twice to launch into the bootloader. The on-board LED should start pulsating to indicate this.

Press RESET twice quickly to launch the bootloader on the Arduino Nano 33 BLE Sense.

2. Update the firmware

The development board does not come with the right firmware yet. To update the firmware:

1. [Download the latest Edge Impulse firmware](#), and unzip the file.
2. Open the flash script for your operating system (`flash_windows.bat`, `flash_mac.command` or `flash_linux.sh`) to flash the firmware.
3. Wait until flashing is complete, and press the RESET button once to launch the new firmware.

3. Setting keys

Follow this [video](#) to install the Arduino CLI on Windows 10 and add the 'arduino-cli' binary to your PATH. **This makes the CLI available from any location through the command prompt.**

The screenshot shows the Edge Impulse Studio interface for data acquisition. On the left, a sidebar lists project options like Dashboard, Devices, Data acquisition, and ImpulseNet. The main area displays a project titled "POTTING_PROJECT". A modal window titled "studio.edgeimpulse.com wants to connect to a serial port" lists available ports: cu.Bluetooth-Incoming-Port, cu.MALS, cu.RovalisAirPods-Wireless, cu.SOC, and Nano 33 BLE (cu.usbmodem144301) - Paired. The "Connect" button in this modal is highlighted with a red box and labeled "3". Below the modal, the main interface shows "No data collected yet" and a "Let's collect some data" button. To the right, a "Record new data" section indicates "No devices connected to the remote management API." and features a "Connect using WebUSB" button, which is also highlighted with a red box and labeled "2". A callout box at the bottom left, labeled "1" with a blue arrow pointing to it, contains the text: "Do not forget to connect the Nano with your PC serial via Arduino-CLI, before starting collecting data."

Do not forget to connect the Nano with your PC serial via Arduino-CLI, before starting collecting data.

The screenshot shows the Edge Impulse studio interface for creating a new impulse. The left sidebar contains navigation links for Dashboard, Devices, Data sources, Data acquisition, Impulse design, Create impulse, Image, Transfer learning, EON Tuner, Retrain model, Live classification, Model testing, Versioning, Deployment, Documentation, and Forums. Below these are sections for Getting Started, Documentation, and Forums. The main workspace is titled 'CREATE IMPULSE (IESTI01 - IMAGE CLASSIFICATION)' and contains four main components: 'Image data' (red card), 'Image' (white card), 'Transfer Learning (Images)' (purple card), and 'Output features' (green card). The 'Image data' card has settings for input axes (image), image width (96), image height (96), and resize mode (Squash). It also includes a note about optimal accuracy for transfer learning blocks. The 'Image' card has a name field set to 'Image' and an input axes section with a checked checkbox for 'image'. The 'Transfer Learning (Images)' card has a name field set to 'Transfer learning' and an input features section with a checked checkbox for 'Image'. The 'Output features' card lists '2 (background, medicine)'. A large green 'Save Impulse' button is located on the right side of the workspace. At the bottom, there are dashed boxes for adding a processing block and a learning block, each with their respective icons (lightning bolt and flask).

Train

The screenshot shows the Edge Impulse Transfer learning interface. On the left, a sidebar lists various options like Dashboard, Devices, Data sources, etc. The main area is titled "TRANSFER LEARNING (IESTI01 - IMAGE CLASSIFICATION)".

Neural Network settings:

- Training settings:
 - Number of training cycles: 50
 - Learning rate: 0.0005
 - Validation set size: 20%
 - Auto-balance dataset:
 - Data augmentation:
- Neural network architecture:
 - Input layer (9,216 features)
 - MobileNetV1 96x96 0.2 (no final dense layer, 0.1 dropout) (highlighted with an orange border)
 - Output layer (2 classes)

Training output:

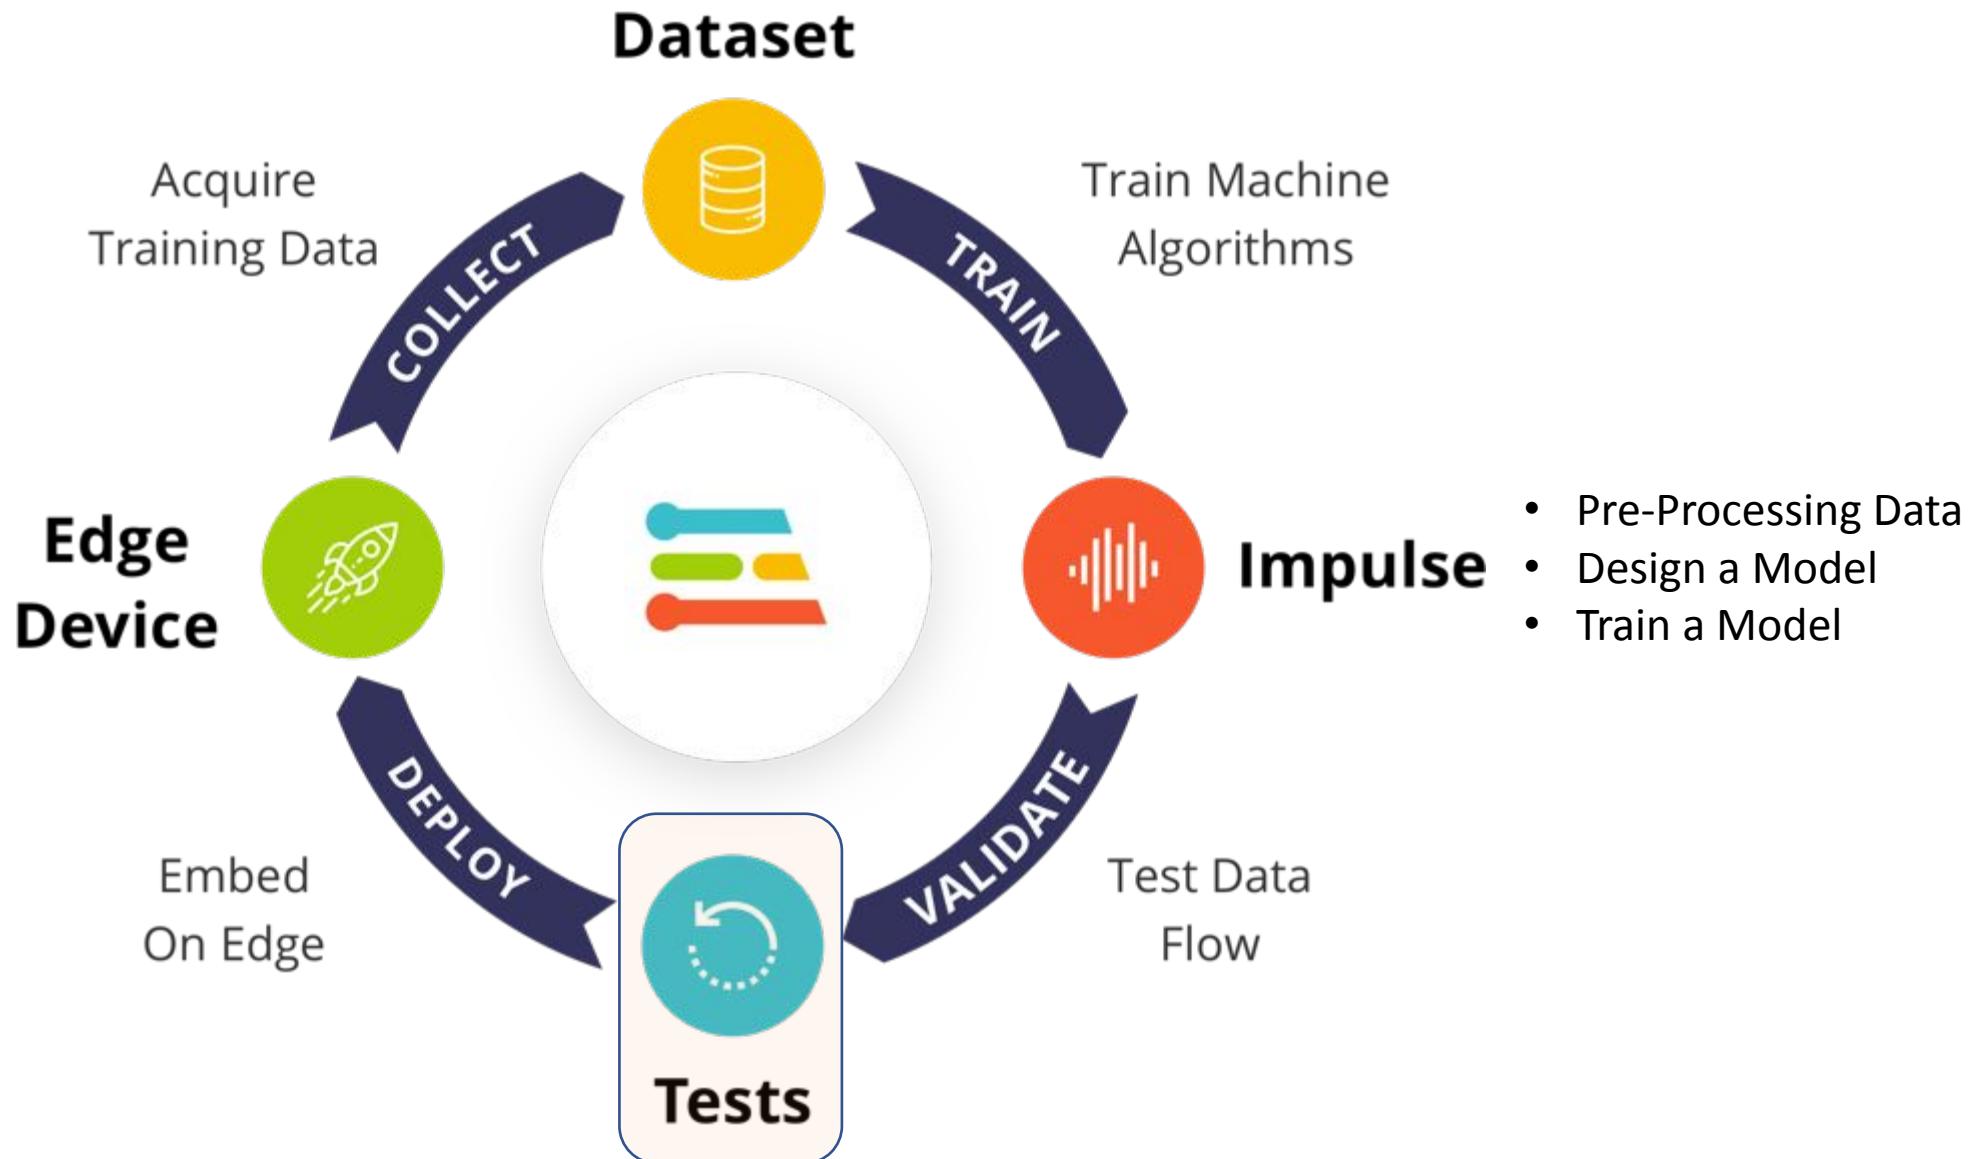

Very Good Accuracy

- Model:** Model version: Quantized (int8) (highlighted with an orange border)
- Last training performance (validation set):
 - ACCURACY: 100.0% (highlighted with an orange border)
 - LOSS: 0.28
- Confusion matrix (validation set):

	BACKGROUND	MEDICINE
BACKGROUND	100%	0%
MEDICINE	0%	100%
F1 SCORE	1.00	1.00
- Data explorer (full training set):
 - Legend: background - correct (green), medicine - correct (green), medicine - incorrect (red)
 - Scatter plot showing data points for background and medicine categories.
- On-device performance:
 - INFERENCING: 3,592 ms.
 - PEAK RAM USED: 106.2K
 - FLASH USAGE: 225.3K

Annotations:

- A green arrow points from the "Model" section to the "Quantized (int8)" dropdown.
- A blue arrow points from the "MobileNetV1" section to the "High Latency" text.
- A pink arrow points from the "On-device performance" section to the "Memory OK" text.
- A large blue arrow points from the "MobileNetV1" section to the "On-device performance" section.

Test

The diagram illustrates the machine learning workflow:

- Training Set**, **Validation Set**, and **Test Set** are input into the **Machine Learning Algorithm**.
- The **Machine Learning Algorithm** processes the data and outputs the **Final Model**.
- A feedback loop labeled "Training, tuning, evaluation" connects the **Validation Set** back to the **Machine Learning Algorithm**.
- The **Final Model** is used to estimate final performance.

EDGE IMPULSE

Test data

Set the 'expected outcome' for each sample to the desired outcome to automatically score the impulse.

```

The screenshot shows the Edge Impulse Studio deployment interface. At the top, there's a header bar with tabs for 'Deployment - IESTI01 - Image' and a '+' button. Below the header is a navigation bar with back, forward, search, and other icons. The main content area has tabs for 'Computer' and 'Mobile phone'. A section titled 'Select optimizations (optional)' contains a note about performance trade-offs and a toggle switch for 'Enable EON™ Compiler'. Below this is a list of 'Available optimizations': 'Quantized (int8)' (Currently selected), which has a green checkmark icon; and 'Unoptimized (float)', which has a 'Click to select' button. A large blue curved arrow originates from the 'Quantized (int8)' section and points towards the file selection dialog. The 'Build output' section shows logs for creating a zip file and writing files to a device. At the bottom, a file list shows 'ei-iesti01---image-classification-arduino-1.0.1.zip'.

I want to thank **Shawn Hymel** and Edge Impulse, **Pete Warden** and **Laurence Moroney** from Google, Professor **Vijay Janapa Reddi** and **Brian Plancher** from Harvard, and the rest of the **TinyMLedu** team for preparing the excellent material on TinyML that is the basis of this Workshop.

The SciTinyML workshops are part of the [**TinyML4D**](#), an initiative to make TinyML education available to everyone globally.

Thanks

UNIFEI
